

How much does college cost?

Comparing college costs is worth your time.
Plan to take a few steps.

step
1

Think about the amount you'll actually pay.

Don't get hung up on the listed price. Few students actually pay that amount. Merit and need-based aid can make a huge difference, lowering the listed price to a 'net price' and making college much more affordable.

What to consider about Minnesota private colleges:

If your family is like 94% of the families of first-time students at Minnesota private colleges, your tuition bill will be reduced by financial aid you never have to pay back.

The average first year student at our colleges receives \$22,335 in grants. On average, they end up paying only 40% of the full tuition price. ▶ That's largely possible because our institutions award more than \$613 million in institutional grants and scholarships.

step
2

Consider graduation rates.

How likely is it that you'll graduate in four years? No one plans to take six years to graduate, but it happens. Graduating on time will help you save money and you'll start working — and earning — earlier.

You're much more likely to graduate on time at one of Minnesota private colleges. Our four-year graduation rate of 66% is far higher than the rates at the University of Minnesota (53%) and Minnesota State universities (23%). ▶ Why the difference? Credit the personalized attention and support our students receive.

step
3

Weigh the value of the investment.

Think about the quality of the education you'll receive. How will your choice help you start your career — and advance it later? And how will you be impacted in other ways?

The knowledge and skills gained at Minnesota private colleges are exactly what employers seek. Students at private colleges are more likely to interact directly with faculty, with most classes having fewer than 20 students. That leads to a higher quality experience. ▶ Ask our graduates: 90% say they gained real-world experience and workforce preparation through internships, hands-on research and more. ▶ Employers want to hire problem solvers who are well-rounded and curious — traits cultivated by a liberal arts education offered by our colleges.

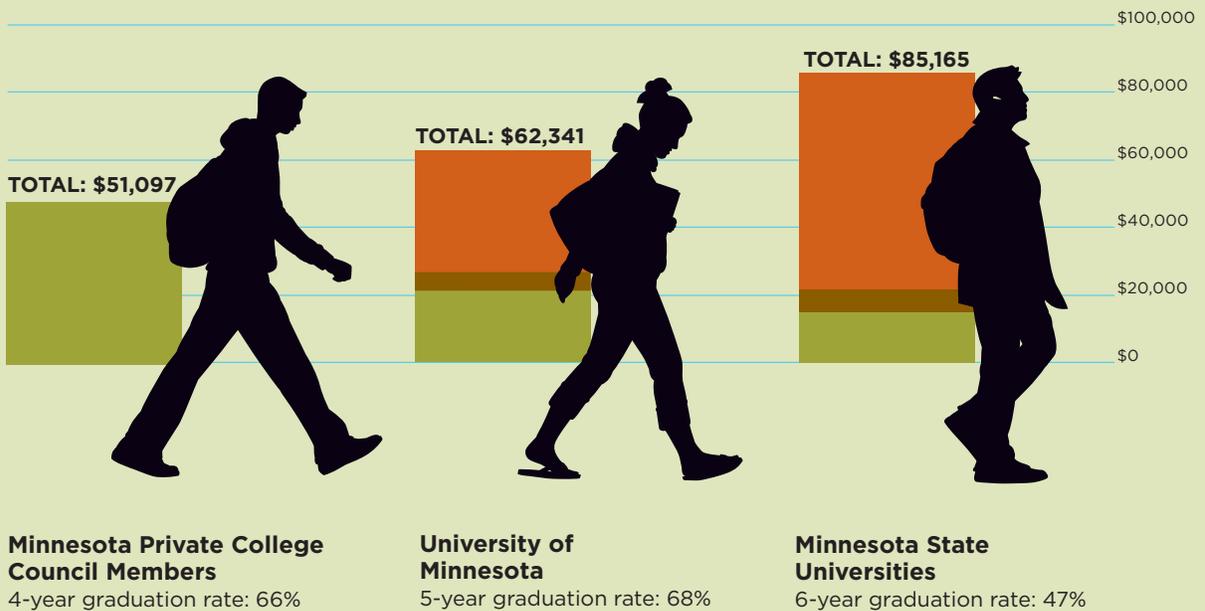

Comparing Your Overall Costs

Considering graduation rates and lost earnings

Why pay for extra semesters when you can finish in four years and start earning money or working on another degree sooner? When it comes to comparing college costs, remember that it is more complicated than just lining up listed prices. You'll want to consider a variety of factors that can impact your costs before deciding which college is best for you.

ANALYSIS: Minnesota Private College Council, July 2017; IPEDS 2009 cohort data
 NOTES: Estimated annual lost income of \$33,523 based on graduate employment outcomes data from the Minnesota Department of Employment and Economic Development; increases in tuition or earnings are not forecasted. Room and board costs are not included.

- **OPPORTUNITY COST:** Lost earnings
- Average net tuition for additional years
- Average net tuition for four years
